Agenda

Introduction
- Overview of Methodologies
- Exercise; empirical learning
- Agile Manifesto
- Agile Values
- History of Scrum
- Exercise: The offsite customer

Scrum 101
- Scrum Overview
- Roles and responsibilities
- Scrum team
- Product Owner
- ScrumMaster
Agenda

Scrum In-depth
- The Sprint
- Sprint Planning
- Exercise: Sprint Planning
- Tracking Progress
- Daily Scrum
- Exercise: Running a Daily meeting
- Sprint Review
- Sprint Retrospective
- The ScrumMaster role:
- Exercise: Great ScrumMaster scenarios
- Exercise: Velocity game

Optional modules:
- Scaling Scrum
- Distributed Scrum
Introduction
A Defined Process

Donut Mix → [Image of Donuts being fried] → Yummy Donuts!
The Waterfall

Advantage: Highly Logical
Disadvantage: High failure rate, low process efficiency
Agile Development

- Short Iterations of 1-4 weeks
- Incremental releases
Agile Development

- Do a little bit of everything every cycle
Agile
“Agile” is a great buzzword. Who doesn’t want to be Agile?

No one says, “Thanks, I’d rather be inflexible and slow to respond.”
The Agile Manifesto – 2001

We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value:

**Individuals and interactions** over processes and tools

**Working software** over comprehensive documentation

**Customer collaboration** over contract negotiation

**Responding to change** over following a plan

That is, while there is value in the items on the right, we value the items on the left more.

Kent Beck, Mike Beedle, Arie van Bennekum, Alistair Cockburn, Ward Cunningham, Martin Fowler, James Grenning, Jim Highsmith, Andrew Hunt, Ron Jeffries, Jon Kern, Brian Marick, Robert C. Martin, Steve Mellor, Ken Schwaber, Jeff Sutherland, Dave Thomas
Agile Myths

- No design
- No planning
- Poor quality
- “Cowboy” Coding
- Only works on small projects
What is Scrum?

A flexible framework that is:

- Collaborative
- Iterative & Incremental
- Commonsense
- Very simple but very hard; it causes change.
Scrum Values

- Respect
- Commitment
- Focus
- Openness
- Courage
A silver bullet?

- We need three more programmers.
- Use agile programming methods.
- Agile programming doesn’t just mean doing more work with fewer people.
- Find me some words that do mean that and ask again.

© Scott Adams, Inc./Dist. by UFS, Inc.
Scrum Disadvantages

- Makes all dysfunction visible
- Bad products will be delivered sooner, and doomed projects will fail faster
- People follow the mechanics but not the values.
Scrum Focus

- Strategy
- Portfolio
- Product Vision
- Release Plan
- Iteration Plan
- Daily Plan
Scrum 101

Sprint Planning

Product Backlog

Daily Stand-up

Sprint Review

Potentially Shippable Product Increment

Team Retrospective

Challenges
- Testing
- Build breaks
- Improvement

No Changes
(in Duration or Deliverable)

Commitment

Scrum Roles

Product Owner

Determines what should be produced, to maximize ROI for the business

The Team

Cross-functional and self-organizing team of 7 people +/- 2

ScrumMaster

Protects and serves the Team, and supports their practice of Scrum
Product Backlog

- A prioritized list of requirements
- Prioritized by the product owner
Sprint Planning

- Planning at the start of a Sprint by the whole team and Product Owner
- Team creates tasks, estimates, and volunteers for them

This is the Sprint Planning Meeting
Sprints

1 month timebox of work
During the Sprint:

- Analysis
- Design
- Code
- Test

A little bit of everything
Daily Stand-Up

- A daily team meeting
- Keep up to date
- Help each other to resolve problems

This is the Daily Meeting (Stand-Up)
Sprint Review

A demo by the team of:

- Complete
- Fully tested
- Potentially shippable features

Anyone can attend

This is the Sprint Review
Sprint Retrospective

- A meeting at the end of each Sprint so the team can Inspect and Adapt the process.

This is the Sprint Retrospective

Challenges
- Testing
- Build breaks
- Improvement
### Two week Sprint Cycle Example

<table>

#### First Sprint

- **M**: - 9:00 - 12:00 Sprint Planning
- **T**: Daily Scrum
- **W**: Daily Scrum
- **Th**: Daily Scrum
- **F**: Daily Scrum

#### Second Sprint

- **M**: - 9:00 - 12:00 Sprint Planning
- **T**: Daily Scrum
- **W**: Etc...
- **Th**: Etc...
- **F**: Etc...
Are you doing Scrum?

1. Do you deliver working software at the end of each Sprint (less than 4 weeks) that is tested at the feature level?

2. Do you do just enough specification before starting a Sprint and are their near-term Product Backlog items small and clearly understood to be completed within a sprint?

3. Do you have a Product Owner and a Product Backlog with prioritized items estimated by the team?

4. Does the team have a release burn-down chart and does the team know their velocity?
You know when you are not doing iterative development when:

- Iterations are longer than 2-4 weeks
- Team tries to complete specification before programming
- An iteration does not include testing
- Iteration does not produce workable code
- Detailed (task level) plans are accurate estimates and expected at the beginning of a project
- The sprint plan doesn’t reflect what the team is doing.
You know when you are not doing agile development when:

- There is little co-operation within the team
- Design and code is produced by individual effort
- Progress is measures by hours spend or documents created instead of working code
- Builds are done once every three weeks.
Product Owner

- Product visionary
- Maximizes business value
- Prioritizes and clarifies requirements.
Product Owner Responsibilities

Does
- Provide clear product direction
- Work with the team closely to clarify requirements
- Actively manages the product backlog
- Represents the business and customer needs.

Does not
- Assign work to team members
- Give fixed date fixed scope projects without team consent
- Change priorities during an iteration.
Exercise: Choosing a Product Owner

- In your team come up with a list of attributes for your Product Owner
- Discuss who would make a good Product Owner in your organization
The Scrum Master

Similar to a Project Manager, …yet different
A facilitator
Removes impediments
The Role of the ScrumMaster

- The ScrumMaster does everything in their power to help the team achieve success
- This includes:
  - Serving the team
  - Protecting the team
  - Guiding the team’s use of Scrum
What does a ScrumMaster do?

- Setup meetings
- Facilitate meetings

<table>

| Daily Scrum | Daily Scrum | Daily Scrum | Daily Scrum | 2-3pm Sprint Review
|            |            |            |            | 3.30- 4pm Sprint Retrospective |
What do they do?

- Coach team in Scrum values and practices
- Protect from disruption
- Remove impediments
- Listen and help
- Track progress
Exercise: Facilitation

Work with your table to describe the difference between “directing” and “facilitating”

Directive: “Do this task now”
Facilitative: “What support do you need to get around this problem”?

Working with your table, come up with 2 “directive” and 2 “facilitative” statements.
Exercise: Choosing a ScrumMaster

- In your team come up with a list of attributes for a good ScrumMaster
- Discuss who could be a ScrumMaster in your organization.
The Scrum Team

Cross-functional
Self-Organizing
Shared Commitment.
Team

- 7 people, + or – 2
  - Has worked with as high as 15, as few as 3
  - Can be shared with other teams (but better when not)
  - Can change between Sprints (but better when they don’t)
  - Can be distributed (but better when colocated)

- Cross-functional
  - Possesses all the skills necessary to produce an increment of potentially shippable product
  - Team takes on tasks based on skills, not just official “role”

- Self-managing
  - Team manages itself to achieve the Sprint commitment
Basic truths about team motivation

- People are most productive when they manage themselves;
- People take their commitment more seriously than other people's commitment for them;
- People do their best work when they aren't interrupted;
- Teams improve most when they solve their own problems.
Ideal Environment

- Everyone in same location
- Open space without barriers
- Resources available: phone, whiteboards, meeting space etc
Collaborative workspace
What happens to the manager in Scrum?
Manager 2.0

- Cross off the list everything that:
  - Conflicts with Scrum
  - Is unnecessary in Scrum
  - Would undermine the team's self-organization and self-management
<table>
<thead>
<tr>
<th>Decides task assignments among the team members and assign them</th>
<th>Provide coaching and mentorship to team members</th>
